Table 1: **Original v7 results** (v7 delta-bins only; *not* v6, v7b, or the June rerun): ROC_G and ρ , all four eval-time typicality corrections as separate rows. Sources: **Hyponymy/G2-9b-it** from the complete local-mll table `v7_rosch_all_metrics`; everything else recomputed from the raw `eval_model.sN` pod scores. IFEval split per cell: _o=OOD (20 prompts), _i=ID (79). **Own-typ ifeval exists only on ID** (own-OOD was never run in v7); base-typ ifeval is OOD. ---=not on disk in v7. All epoch 2.
